Product Information

Day for Night Filters

Day for night filters are a cost effective way of creating a dusk or night time effect whilst shooting in daytime.

Cool Day for Night

This filter creates a moonlight effect by adding a blue / lavender tone. This combines with a low contrast component which diminishes the ability to see detail.

Available in densities 1,2 and 3

Mono Day for Night

This is a yellow /green filter which removes red tones enabling a monochromatic night time effect to be created. Affects the colour balance so needs careful control.

Available in densities 1,2 and 3

Twilight Grad

This provides a cooler bluer image ideally suited to creating a late afternoon/early evening twilight effect. It has a darkish blue top which blends into a pinkish horizon. It is available in densities 1, 2, and 3.
