## Product Information

---

### Low Contrast Filters

These filters, as their name implies, reduce contrast levels. They lighten darker areas, enabling more detail to be visible in shadows. They are quite often used when shooting video to help give a film type look. White areas are retained and colours are muted.

#### **Low Contrast**

Standard low contrast filters are available in densities 1/8, 1/4, 1/2, 1, 2, 3, 4, 5.

#### **Soft Tone Cool**

The new Soft Tone cool filter, launched as part of the Soft Tone range in 2007, can be used as a super low contrast filter.

Available in densities 1, 2, 3.

#### **HD Optical Filters Ltd**
